

GenAI CAPSTONE: Famous Figure

Resume

Level – 101

Objective:

In this project, you will pick a famous or historical figure. They can be dead or alive, but make sure they are someone well known. You will be creating a resume for this person, using ChatGPT or Google Gemini, that highlights their skills, work experience, and qualifications.

You will also use Delimiters to indicate to what kind of formatting or information you want to highlight in the resume that is generated.

Requirements:

The resume you create for your figure should at least include the following sections:

- **Contact Information** – Full name, phone number, email, and address
- **Education** – Include universities attended, degrees, and graduation date
- **Skills** – Highlight any technical or soft skills
- **Certifications & Licenses** – List name of certification and date received
- **Languages** – Include proficiency in that language and ability to read/write in that language
- **Projects** – Include name of project and brief description

- **References** – Note a name, brief description of who the reference is, and their contact information.

Summary Notes:

If one of the above sections does not make sense for the person you are using, create a prompt that comes up with information that matches what this person would likely have in this section.

You can generate this resume using one big prompt or by splitting it into several prompts as you try to create the information for each section. Make sure that you are at least using 2 delimiters in your prompts for this assignment.

Once you have all the sections of the resume, put it all together in one document. Feel free to design the document to make it look nicer. However, this is not necessary. You just need to make sure all sections listed above are in the document.
